ISM3232C

Module 2 Project: Calculator Program

Instructions

In this assignment, you will create a simple calculator program described in the Chapter 1 section, A tiny bit of type safety can't hurt in the "Learn TypeScript 3 by Building Web Applications" book.

If you use the Horizon system, all required software is pre-installed and configured.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Once your project is complete, commit your files (source code and a snip of the execution) to the classroom repository for this assignment. I will clone and grade your repo after the due date.

There is no Canvas submission for this project, you will commit the PowerPoint presentation with screen snips to the provided classroom repository.
